

INFORMATION

Crystal Reports for .NET Developers

Best-of-breed report creation and integration included in your IDE

Crystal Reports for .NET is available out of the box in Visual Studio, C# Builder and Borland Delphi.

Web or Windows reporting solutions

Seamlessly integrate reports into your applications, and deploy easily as a zero- or rich-client solution.

Completely scalable deployment solutions

From small scale component based reporting, included in your choice of .NET development software; right through to fully managed, enterprise wide reporting - Business Objects has a reporting solution to suit your needs

The Reporting Standard for .NET

Crystal Reports® for .NET is the web and Windows reporting standard for Microsoft® Visual Studio® .NET 2003, Borland® C#Builder™ and Borland Delphi™ 2005. Use it to create, integrate, and deliver reports as an integral part of your custom .NET applications.

Included with your purchase of Visual Studio .NET, C#Builder and Delphi 2005; and installed by default, this special edition of Crystal Reports enables you to:

Crystal Reports in a .NET development environment

- Easily create reports directly within your choice of familiar application development environments
- Increase productivity using Crystal Reports' powerful report creation, integration and delivery tools in your application, instead of hand coding.
- Deliver Web based interactive, highly graphical reports on any device through an XML Web Services model
- Distribute pixel-perfect reports in rich-client Windows environments

Features

WYSIWYG Integrated Report Designer. Seamlessly create print-quality reports using this rapid application development (RAD) tool directly within the Visual Studio .NET, Delphi and C#Builder integrated development environments (IDEs).

Export Reports to Popular Formats. Allow end users to automatically generate, print and export reports in a choice of industry standard formats including Excel, PDF, and editable RTF, without additional coding

Web Form and Windows Form Viewer Controls. Rapidly integrate and display reports in your application by including these viewer controls.

ADO.NET Dataset Support. Consume on-the-fly runtime data, use virtually any managed provider, and connect to XML Report Web Services.

Runtime Object Model. Benefit from using this native .NET object model to provide runtime customization of reports, the ability to resize and reposition objects, as well as pass report parameters and logon credentials.

[Use Crystal Reports XI for advanced features and increased performance](#)

Crystal Reports XI Developer Edition and Crystal Reports Server XI are feature-rich upgrades from the bundled Crystal Reports for .NET technology that ships within Visual Studio .NET 2003, C#Builder, and Delphi 2005. They take reporting for .NET applications to the next level with innovative new technology for faster report design, enhanced web integration and greater levels of performance and report management.

Upgrade to Crystal Reports XI for:

1. Free run-time licensing

Your Crystal Reports XI Developer edition gives you unlimited licensing for deploying Crystal Reports within your organization

2. Additional data connectivity

Connect to almost any data, including:

Enterprise data sources (Oracle®, IBM® DB2®, Sybase®, Informix®)
XML, Teradata and Exchange 2003
ODBC, OLEDB, ADO.NET

3. Additional export formats

Export to popular formats, including:

Adobe PDF	Microsoft Excel and Word
XML (rich-client only), HTML	Editable RTF/CSV

4. More report design and formatting options

Powerful report design and formatting options include:

"Format Painter" for fast formatting	Formula Workshop
Gantt and Gauge charts	Custom Web Form toolbar creation capabilities
Geographic mapping	OLAP reports

5. Suite of tutorials

Task-oriented tutorials designed to provide step by step help with the most common Crystal Reports tasks

6. Dynamic image inclusion

Images can be stored outside of the database and do not need to be embedded into a report. This saves resources, reduces the size of reports and allows easy re-use

7. Additional international language support

Any language that is not supported by default can be easily included in your project

8. Enhanced data set processing

Optimized data processing and report rendering for increased performance

9. Simplified deployment

Single merge module to provide the easiest and quickest way to deploy your applications

10. Standalone report designer

Separate application development from report design to facilitate report maintenance and accelerate application development

New Crystal Reports Server XI additionally includes:

11. Component re-use for faster report design

Design reports faster by storing key report objects – including text objects, SQL commands, bitmaps, and custom functions – in a central library. Objects can be re-used, shared, and updated from a single place for faster report design and maintenance. Custom functions help eliminate redundant formula creation by extracting business logic from formulas for use across multiple reports.

12. URL reporting

Report viewing can be added into web pages with no HTML coding

13. Report management and delivery

Scheduling capabilities are available based on events, calendars or specific points in time. There are also report security options based on user, group, object, and folder.

14. Report repository

The report repository provides centralized storage for reports. This eliminates the need to duplicate reports which are used by multiple applications.

Scale and extend applications to support new requirements

There are a number of deployment options for Crystal Reports, which are completely scalable as the needs of your organization grow and change.

For development, test and small deployment needs, the special edition of Crystal Reports included with your .NET IDE product is ideal. If your report distribution requirements are greater, Crystal Reports XI Developer or Crystal Reports Server XI are specifically designed to meet the needs of small to medium business. For maximum performance and scalability, including multi-level security, ad hoc report personalization at runtime, high-volume production reporting with scheduling, or other enterprise reporting requirements, you can easily update applications to use BusinessObjects Enterprise XI.
